

MARINE CONSERVATION EXPEDITION

3 WEEK PROGRAM

Our 3-week marine conservation expedition (MCE) is perfect for career changers, those taking sabbaticals or gap years, and individuals studying unrelated subjects. This intermediate course in marine biology requires diving qualification (PADI open water) along with hands-on training in various research areas. Participants will also enjoy off-base activities to explore the beauty of Mauritius. The expedition is more intense and in depth than our escapade plan. It involves more of a professional attitude and is perfect for students aiming to gain extra knowledge and experience of field work.
